

# Rounding “Cheat Sheet”

## Place Values:

\*Notice the different endings to the words, **tens** place is different than **tenths** place!

## How to Round:

1. Go to the place the problem is asking you to round to
2. Then look at the number to it's right.
  - a. If the number is 5 or greater (5,6,7,8,9), round the number in the asked place value up one digit
  - b. If the number is less than 5 (4,3,2,1,0), keep the digit the same.
3. All numbers after the asked place value become 0s
  - a. If the 0s are to the right of the decimal place and no numbers are to the right of them, you can omit it (not write it in)
  - b. If the 0s are to the left of the decimal place, you must leave them
